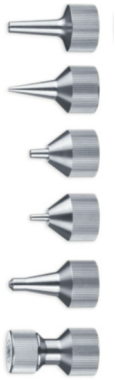
MINERVA Stericlean Limited

Product Memo

The Stainless Steel Spray Gun

A sleek design matched by tough, hard wearing reliable performance



Product Code: 9011

This spray gun is constructed entirely of stainless steel making it one of the most durable spray guns on the market.

It's design and construction makes it suitable for use with demineralised water domestic supply water, pressurised air and nitrogen and is capable of being entirely sterilised ready for use in the operating theatre or the clean room.

The gun can be entirely disassembled & reassembled by hand, requiring no specialised tools.

The attachments are screwed into the tip ensuring the most reliable & secure fit under pressure supplies.

Available with fabric reinforced PVC or Stainless Steel hosing in 1.5 or 3m lengths, with 1/2 or 3/4 inch fittings as a single gun with hose or gun & hose with accessories.

It is important to know that demineralised water can be highly reactive to certain materials and as such it is equally important to understand which gun is appropriate for your needs.

PVC hosing is NOT suitable for use with demineralised water.
