

3 Line Double Marking Labels

Double labels with process indicators complying with EN ISO 11140 Class 1

Product Code: Quote 3 Line Double Marking Labels

The Famos 3 line Double Marking Labels have been developed to provide sterilisation control and traceability for packages and containers.

As an extension to the 2 Line version labels, these are also available for various sterilisation conditions and have Steam, FO, EO or VH2O2 process indicators to identify which packs have been exposed to the sterilisation cycle.

Capable of accommodating 7 data fields, these labels are designed for use with the Famos 3-Line labelling gun.

The upper material of the labels is water and moisture repellent, resistant to high temperatures and does not shrink during the sterilisation process.

The label adhesive is a high tack latex free synthetic rubber which prevents transfer of toxic substances and is proven to be skin friendly.

The adhesive is Reach & ROHS certified and has been tested up to 134°C for 18 minutes

The label indicators use standardised EN980 symbols and comply with indicator classification according to EN ISO 11140-1
