

Coloured Double Marking Labels

Easily identify packages, containers, files and folders

Product Code: 15.300.141...142 etc

Coloured double label gun labels, without indicators, are available for documentation and traceability purposes.

For pouches with a printed process indicator already embedded you may not need to use a label with an indicator.

Famos label gun labels are available in a range of colours to provide easy recognition of sterile storage items.

As an example, by applying different colours to different months, one can easily recognise the packages or containers on stock which have a shorter expiry date. The labels can also be used for documentation purposes by sticking it into the patient's file or logbook.

Labels measure 37x19mm.
