

## Reamer Brushes

**Ideal for cleaning instruments with lumen or cannulas**

### **Product Code: Quote Reamer Brushes**

Reamer cleaning brushes are ideal for cleaning instruments with lumen or cannulas prior to sterilisation.

They are constructed of nylon bristles in a helical matrix attached to stainless steel handles, able to effectively, thoroughly and easily clean surgical soil and debris.

Reamer brushes are available in several sizes able to fit a variety of instruments and lumen diameters.

Reamer cleaning brushes are designed to be reusable if necessary and can be being cleaned and disinfected with a liquid disinfectant or steam sterilised if required.

(It is always recommended that use of these brushes must be in accordance with the principal product manufacturers' recommendations/ IFU).
