

Roller Storage System

Embedded roller system shelving to aid tray storage and retrieval

Product Codes: FRS 1 & 2

The roller storage system, developed by Famos, has been designed to complement & integrate with existing shelving systems (including the FamoStorage Modular System) whilst easing the wear and tear on baskets, trays, containers and shelves.

The reduction in such wear and tear ensures a longer tray and shelf life, whilst minimising the risk of unwanted particles being produced during the process of friction.

The shelving is constructed from stainless steel and is available in a solid or perforated shelf configuration and is available in two sizes; 600 x 300 mm or 600 x 400 mm.

The system also integrates seamlessly into Belintra & Hupfer storage systems.
