

Steam Spots

Simple Steam Spot indicators - Easy to dispense, easy to check

Product Code: 15.100.222

The Famos Spot Indicators are small single use adhesive tabs that can be easily attached to trays, containers and packages and readily indicate whether the item has undergone the sterilisation process.

Whilst not capable of measuring or displaying the parameters of the sterilisation process itself, the Spots are easily dispensed and give clear distinction between sterilised and unsterilised pouches, packages, trays or containers.

Famos Spot Indicator tabs are also available for FORM & EO sterilisation processes.

The label indicators comply to ISO 11140 Type 1 and are roll packed in an easy to use dispenser box.

The surface material is water and moisture repellent, resistant to high temperatures as well as having zero shrinkage during sterilisation.
