

## TOSI®

**Wash monitoring and validation complying with EN ISO 15883**

**Product Code:11100-12**

With the requirement to test and evaluate automated washers, carts and ultrasonic machines, the TOSI offers SSD professionals an accurate and easy test for all types of washer dis-infectors.

The etched stainless steel plate and the graduated perspex cover duplicate a variety of surgical instruments.

The test soil has been correlated to human blood without being hazardous in the field of use.

This enables the test to detect residue down to the microgram scale.

The TOSI offers an exacting test that will complement existing cleaning protocols whilst offering a quick visual check of the machine's operational effectiveness.

All data can be collated and kept as evidence of compliance.
